**Insert Symbols Into Portfolio - Metastock**

File

Only show symbols in the directory  [                ]  [    ]  **1**

☑  Traverse Sub Folders  **2**

Symbol:  [                ]  [ Lookup ]   Type * to show all symbols  **3**

Make your selection from the list below:  **4**

| Symbol | Description | |
|--------|-------------|---|
|        |             |   |

Set symbols to the Exchange  [ ASX ▽ ]  **5**

[ Add ]  [ Close ]

## Item # 1
If this is blank then it will show the symbols as requested in the Symbol look up (#3)

If this has a directory in the field eg: c:\Pd\ASX\
then QM will only source symbols from the c:\Pd\ASX\ directory

## Item # 2
If this box is ticked it will display all files in all subdirectories starting with the parent directory in item #1

Eg if Item#1 is C:\Pd\ASX
and item #2 is ticked then symbol lookup will source all files in all subdirectories
C:\Pd\ASX\Equities\A
C:\Pd\ASX\Equities\B
C:\Pd\ASX\Equities\C
C:\Pd\ASX\Indices
C:\Pd\ASX\Warrants
etc

## Item # 3
Keep as is in QM

## Item # 4
Keep as is in QM

## Item # 5
This feature would allow a mass insert of the selected symbols to be automatically allocated to the correct exchange

---

The reason for these features is I could select the directories where I store my Australian data – insert the data and automatically make the exchange ASX

Then I could select the directories for US stocks and automatically make the exchange Nasdaq or NYSE (depending on what directories I select)

This would make Multicharts much easier to use with metastock data
