

## **Instructions for setting up the Day-Session of the Week colour coding indicator.**

To enable this tool to colour code each day correctly, you need to define a custom session specifically for this indicator.

The indicator draws five colours

1. Open QuoteManager from Start/Programs/MultiCharts menu.
2. Select Tools from the menu, Session Templates, Add new Session Template.
3. Enter a description or name for the Template that you will recognize, such as Color Coding.
4. Click the Add button to add a session, and modify the day/time as illustrated in the screenshot below.

5. Save the template, close QuoteManager then open MultiCharts and create a new chart. In the instrument settings, change the session drop box to select the custom session you just created.
6. Add the Sessions of the Week indicator to the chart.
