

## MultiCharts Processes

From MultiCharts

Sometimes you need to restart MultiCharts. If one closes MultiCharts and restarts it too quickly, some of MultiCharts processes may have no time for correct shutdown. After MultiCharts and all of its applications (i.e. MC, QuoteManager, PL editor, ...) are closed, it is recommended to make sure that all processes are ended in the Windows Task Manager:

1. **ATCenterServer.exe**
2. **Fixserver.exe**
3. **MultiCharts.exe**
4. **MultiCharts64.exe**
5. **MCportfolio.exe**
6. **MessageCenter.exe**
7. **PLEditor.exe**
8. **PLEditor.NET.exe**
9. **QuoteManager.exe**
10. **StudyServer.exe**
11. **StudyServer.NET.exe**
12. **TradingServer.exe**
13. **TSServer.exe**
14. **Updater.exe**

Note: The list of the processes your MultiCharts is currently running can be extended depending on the data feed and broker you are currently using.

1. **CQGServer.exe**
2. **CQGServerProxy.exe**
3. **CQG.Trader.Services.CEL.Host.exe**
4. **FXCMServerProxy.exe**
5. **OECServer.exe**
6. **OECServerProxy.exe**
7. **LMAXServerHost.exe**
8. **PATSServer.exe**
9. **PATSWrapper.exe**
10. **Stunnel.exe**
11. **TPserver.exe**
12. **ZfServer.exe**
13. **ZfServerProxyV3.exe**

Note: All processes can be found by sorting the Task Manager Processes tab by the description column. All of them have **MultiCharts** in the description, except for ATCenterServer.exe
